SESSION 36 - FINAL EVALUATION

PAPER TRADING PROJECT

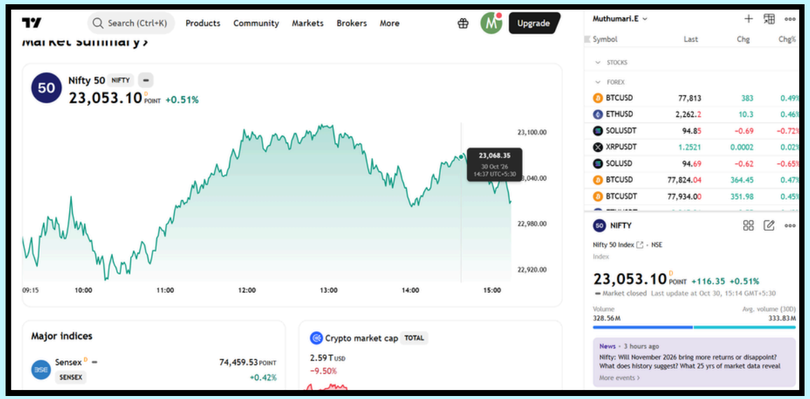

FINAL PORTFOLIO, STRATEGY PRESENTATION AND REFLECTION REPORT

Student Name: Muthumari.E
Programme : II B.Com (Honours)
Trading Platform: Trading View
Trading Period: 09 July 2026 to 17 October 2026
Date of Submission: 01 November 2026

INTRODUCTION

- **Purpose:** To practise trading without risking real money.
- **Activity:** Paper trading on TradingView with a virtual balance of 100,000 USD.
- **Assets:** Bitcoin (main), Ethereum, XRP and Solana.
- **Strategy followed:** Combined Strategy (trend + 50 SMA + RSI + support and resistance) on the 1-hour chart.
- **Period:** July to October 2026.
- **Purpose of this report:** To review my trading record, strategy, discipline and improvement.

VIRTUAL CAPITAL
$100,000

MAIN ASSET
Bitcoin

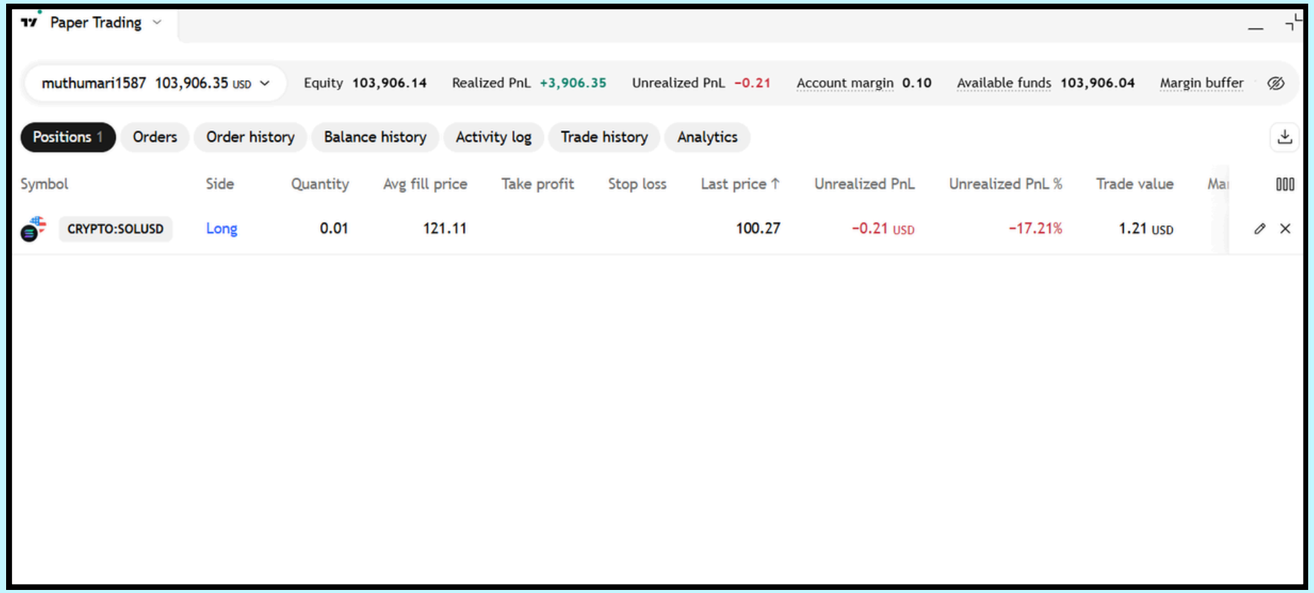

OTHER ASSETS
ETH • XRP • SOL

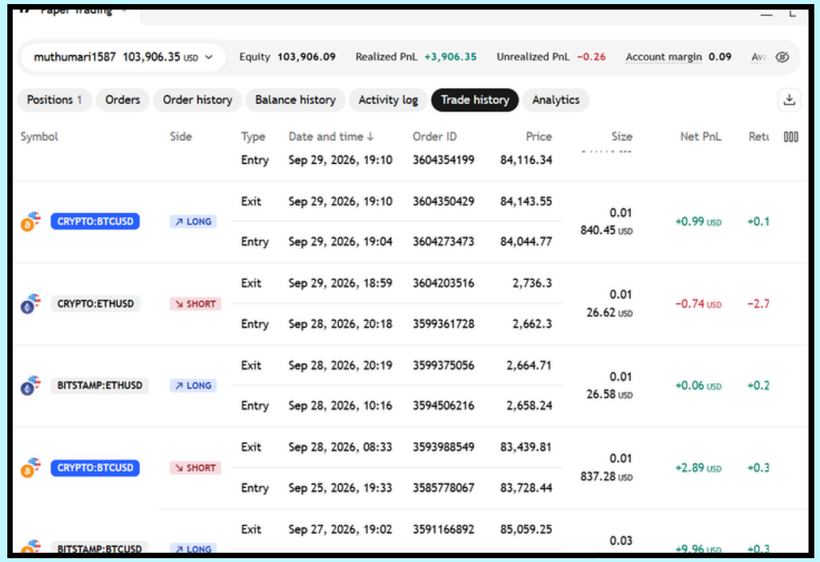

TIMEFRAME
1-hour chart

PERIOD
Jul–Sep 2026

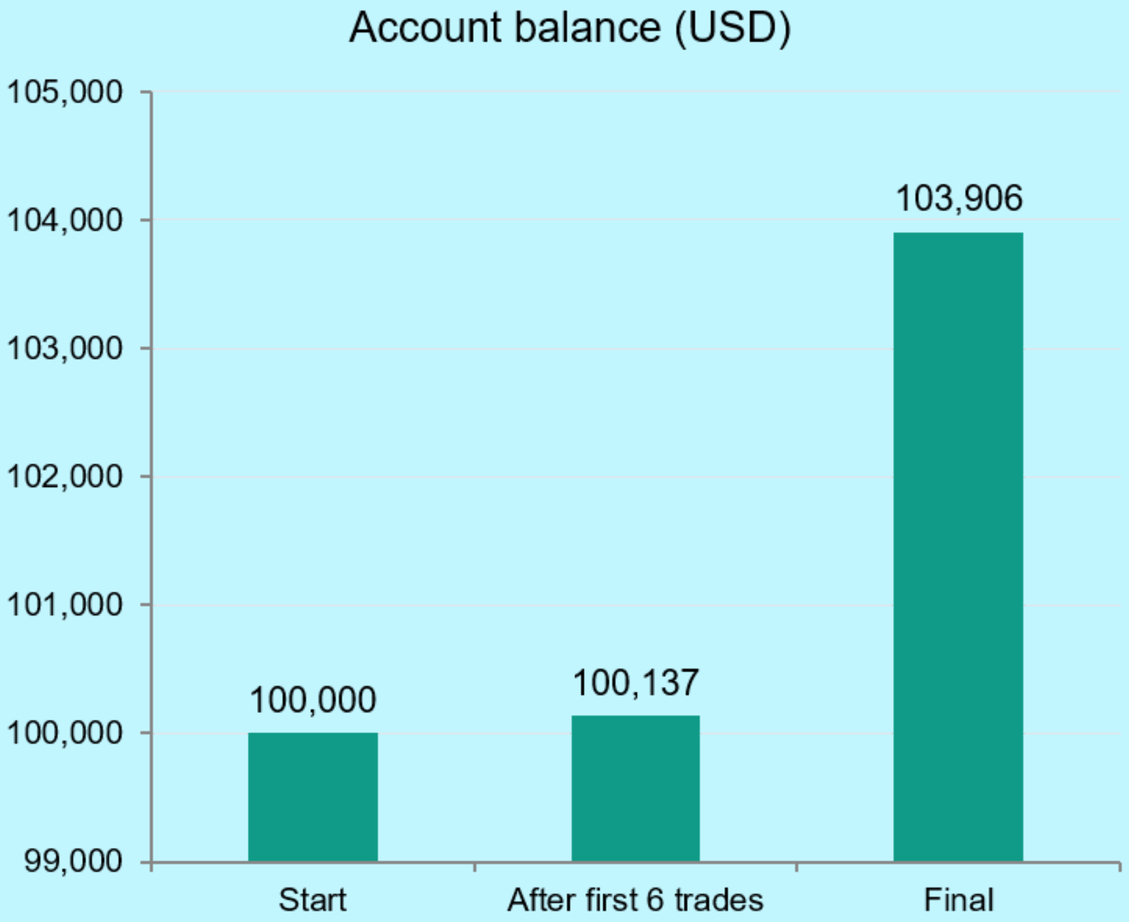

PORTFOLIO SNAPSHOT

Total Trades 19	**Open tr…** 1 (SOLUSD)	**Profitable Trades** 14
Closed Trades 18		**Losing Trades** 4
Realised P&L +3,906.35 USD	**Net P&L** +3,906.14…	**Primary strategy** Combined Strategy
Unrealised P&L -0.21 USD		**Trading period** 09.07.2026 to 17.09.2026

OVERALL PORTFOLIO PERFORMANCE

- Gain: +3.91% on 100,000
- First 6 trades: +136.67 USD (4 wins, 2 losses)
- September trades added about +3,770 USD
- 1 open trade: SOLUSD, -0.21 USD

PROCESS VS OUTCOME

- **Outcome**: Profit (+3.91%).
- **Process:** Good trend reading and good review habit. Weak entry timing, exit planning and stop-loss.
- A large part of the profit came from a few trades in clear trends.
- So the result is better than my process.
- **Lesson:** A profit does not mean the process was perfect. I must improve my process for steady results.

STRATEGY OVERVIEW

Component	Description
Trend	Uptrend: higher highs, higher lows
Entry	Price above 50 SMA; buy in trend direction
Confirmation	RSI above 50, bullish candle, near support
Exit	Near resistance, bearish candle, weak RSI
Stop-loss / risk	Small trade size; avoid unnecessary risk
Other	No early entry; plan entry and exit first

STRATEGY RATIONALE AND APPLICATION

WHY I CHOOSE THIS STRATEGY

- **Three signals together**: The Combined Strategy uses trend, 50 SMA and RSI, so I do not depend on only one signal.
- **What I understood:** The 50 SMA shows direction, RSI shows strength, and support and resistance show entry and exit areas.
- **Suitable market:** It works best in trending markets, mostly uptrends.
- **Good for paper trading:** The rules are simple, and mistakes cost no real money.

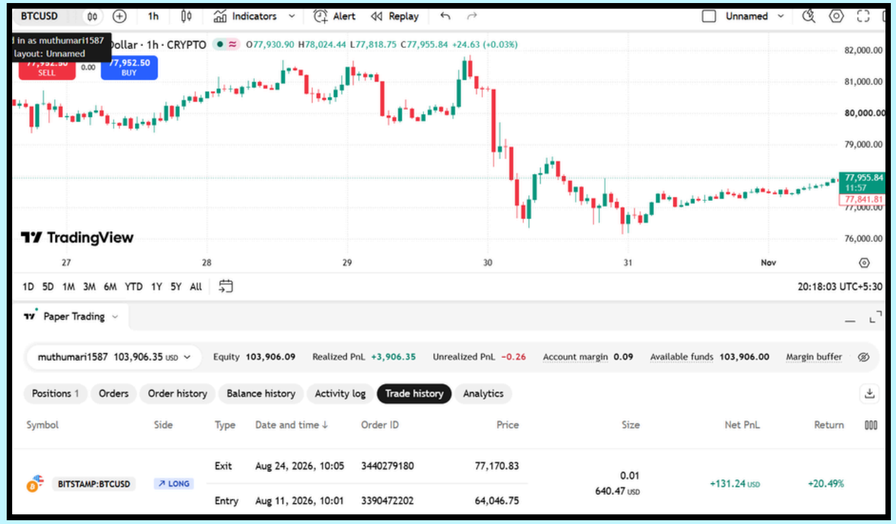

HOW I APPLIED IT

- **What the strategy required:** Confirm the trend, check the 50 SMA and RSI, plan the entry and exit, and wait for confirmation before trading.
- **What I actually did:** I mostly traded in the trend direction and checked the 50 SMA and RSI before most entries. I made planning sheets, but some exits were decided late and sometimes I entered early.
- **Effective application:** BTCUSD Long, bought at 64,047 and sold at 77,171, profit +131.24 USD.
- **Deviations:** BTCUSD Long near resistance without confirmation, loss -9.51 USD. Solana Long in a downtrend is still open at -17.21%.

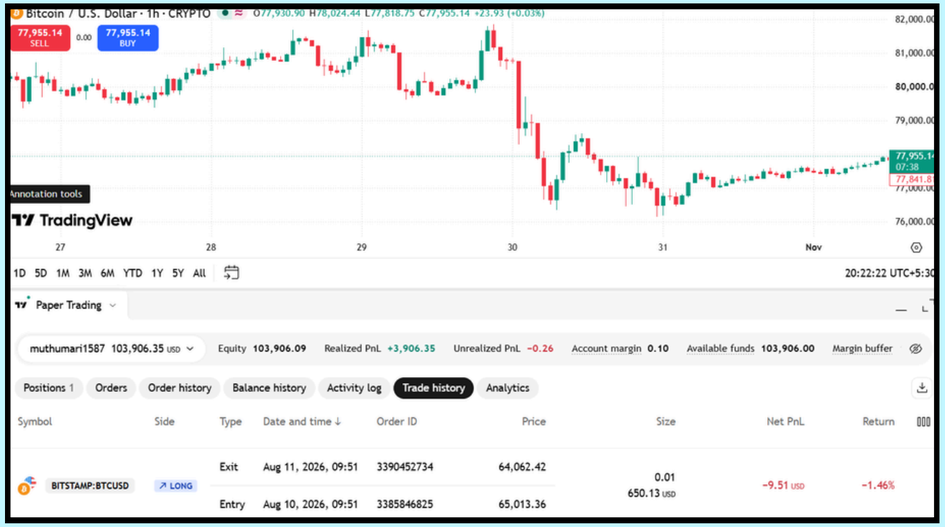

TRADE 1: EFFECTIVE APPLICATION

Item	Detail
Asset / type	BTCUSD, Long
Type	Long
Entry Date	11 Aug 2026
Exit Date	24 Aug 2026
Setup	Uptrend, above 50 SMA, RSI above 50
Entry Price	64,047
Exit Price	77,170
Outcome	+131.24 USD (+20.49%)
Why effective	Followed trend, waited for confirmation, held to planned exit

TRADE 2: STRATEGY DEVIATION

Item	Detail
Asset	Bitcoin (BTCUSD)
Date	10 Aug to 11 Aug 2026
Trade type	Long (Buy)
What was planned	Buy near support after a bullish candle
What happened	Bought at 65,013 near resistance. Price fell. Sold at 64,062.
Problem	Early entry, no confirmation, no stop-loss
Impact	Loss of -9.51 USD (-1.46%)
What to do differently	Wait for confirmation, buy near support, and set a stop-loss

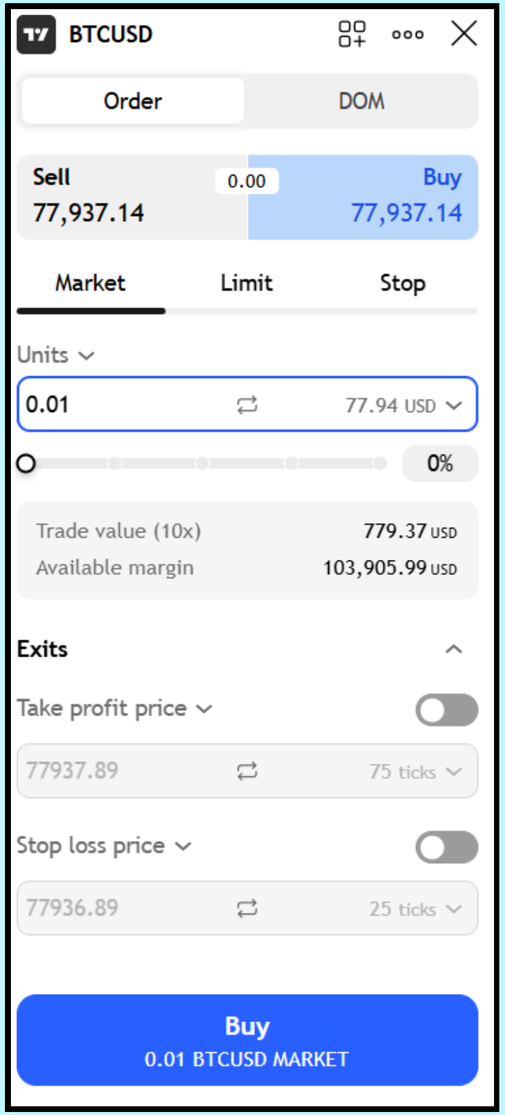

STRENGTHS AND AREAS FOR IMPROVEMENT

Strengths:

1. Finding the trend: My trades in clear uptrends gave good results. The best trade earned +131.24 USD (+20.49%).
2. Small position size: I used only 0.01 size (about 650 USD of 100,000 USD) in the early trades, so my losses stayed under 10 USD.
3. Planning before trading: I made entry and exit planning sheets and checked the 50 SMA and RSI first. I followed my plan in 4 of 5 reviewed trades.

Areas for Improvement:

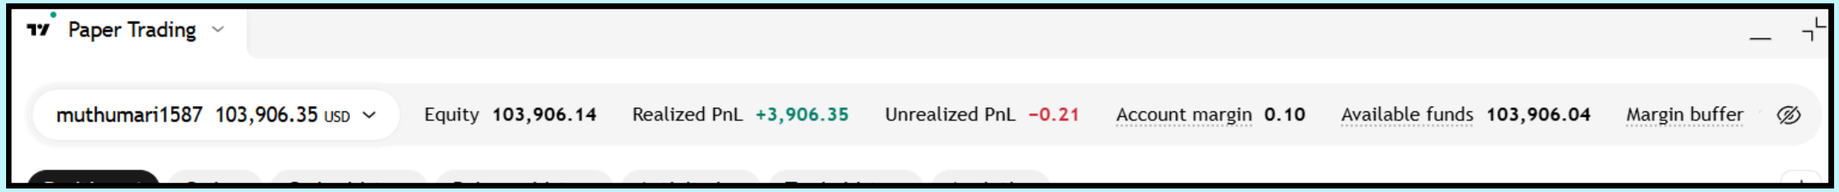

1. Entry timing: I sometimes entered before confirmation. This caused small losses (-9.51 and -8.23 USD), and it happened more than once.
2. Stop-loss and exit planning: I did not use stop-loss orders regularly. I often decided my exit late, after the price had already moved against me.
3. Trading against the trend: The Solana trade was a Long entry in a downtrend. It is still open and is down -17.21%.

OVERALL EVALUATION

- **Net profit:** +3,906.14 USD (+3.91%).
- I followed one main strategy in most trades.
- **Strengths:** trend reading and review habit.
- **Weaknesses:** entry timing, exit planning, no stop-loss.
- **Key learning:** Follow the trend, wait for confirmation, and plan the exit before entering.
- **Future:** Use stop-loss, avoid trades against the trend, and review open trades regularly.

Supporting Portfolio Evidence

Account balance

103,906.35 USD

Equity

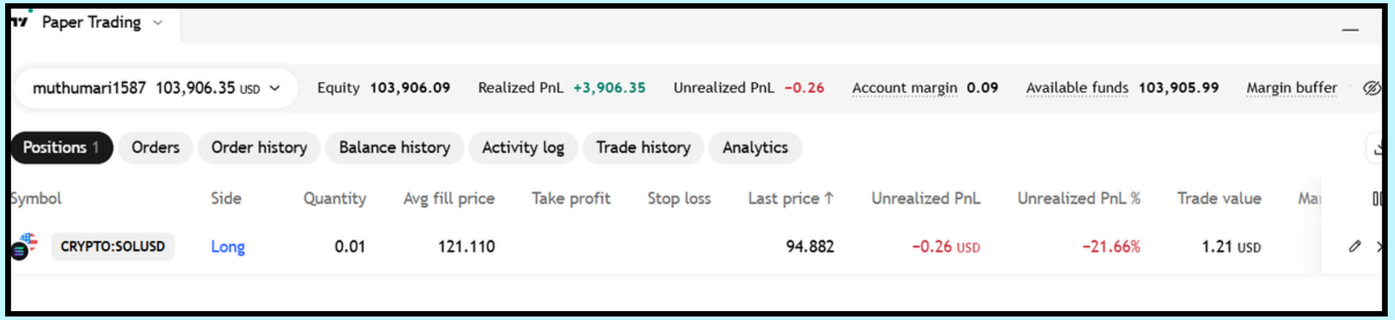

103,906.14 USD

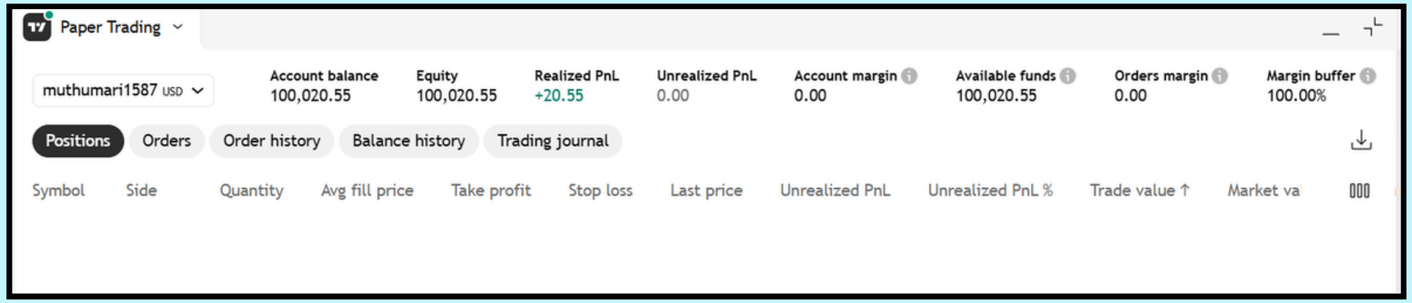

Realised P&L

+3,906.35 USD

Unrealised P&L

-0.21 USD

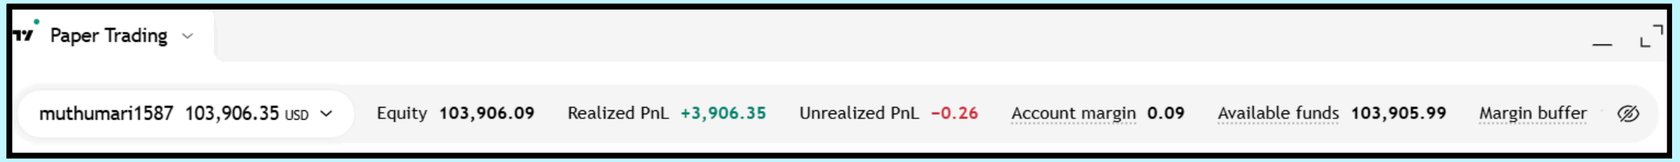

CONCLUSION

1. The paper trading exercise ended with a profit of +3.91%.
2. The Combined Strategy performed well during clear uptrends.
3. My trading discipline improved throughout the exercise.
4. Entry timing and trade management are still areas to improve.
5. Next time, I will wait for confirmation, follow stop-loss, and manage trades carefully.

Thank you
